

April 2008

Brammer UK Manufacturing Forum hailed a success

Attended by over 150 directors and senior managers from manufacturing industry, Brammer's first UK Manufacturing Forum has been hailed as an outstanding success.

Brammer's Managing Director Ian Ritchie addresses delegates at the Manufacturing Forum

Led by independent experts, the Brammer UK Manufacturing Forum offered delegates the opportunity to learn, network and share experiences with industry peers.

Aimed at sharing ideas, best-practice and innovation around key issues central to the competitiveness of UK industry, interactive workshop sessions included; Supplier Relationship Management – led by Daniel Corsten, Professor of Operations & Technology Management at the IE Business School, Madrid; Improving Energy Efficiency in the Manufacturing Process – led by Dave Lewis, Head of Energy Solutions at RWE npower; and Maintaining the Lean Business – led by Arthur David, Director of Industry Forum.

Brammer, Europe's leading distributor of Maintenance, Repair and Overhaul (MRO) products and services, designed each session to highlight new opportunities for cost-reduction, showcase new advances in technology and how these improvements have reduced energy consumption or increased production output and efficiency, and discuss the latest thinking in supplier relationship management.

Attending the event himself, Ian Ritchie, managing director for Brammer UK, said: "Manufacturing remains a key part of the UK economy. In an increasingly competitive and regulated market, this kind of collaborative Manufacturing Forum is an important opportunity for UK industry to come together to share best practice and ideas in order to compete as a stronger entity in the global market."
